

# Lower Your Bottom Line Costs, Liabilities, And Risks With An Environmental Management System

Results of a comprehensive 3-year study throughout Europe to examine the benefits of environmental management systems recently concluded:

“Based on data gathered, there is good confidence that putting a progressively more robust EMS in place will lead to better site environmental management. Sites that are certified under a national accreditation scheme score higher in the site environmental management assessment.”

Numerous other studies conducted here in the United States concur with these conclusions.

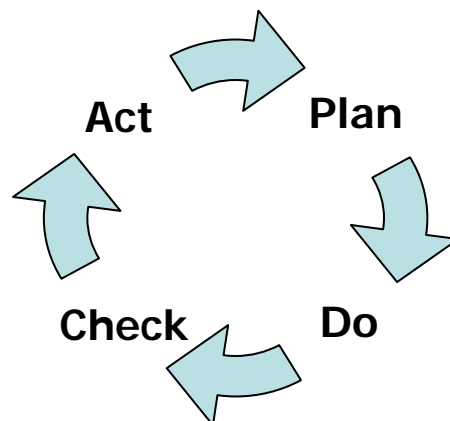

When you can identify, evaluate and prioritize your environmental aspects and impacts, and implement a management system to continually improve performance against objectives your organization will move beyond compliance. In fact, many shareholder interests now reward corporations who integrate management systems into their EHS affairs. Now is the time for your organization to join the future of economic and environmental sustainability and profitability.

Avogadro Environmental Corporation continues to provide proven EHS business management leadership, experience, and success to a growing list of satisfied corporations through a full spectrum of services:
